
Tennessee Valley Authority (TVA): 2025 User Report

Presenters: Quentin K. Anderson

Leo Scott Britt III

Partially taken from Helene presentation by TVA RFC.

What is TVA?

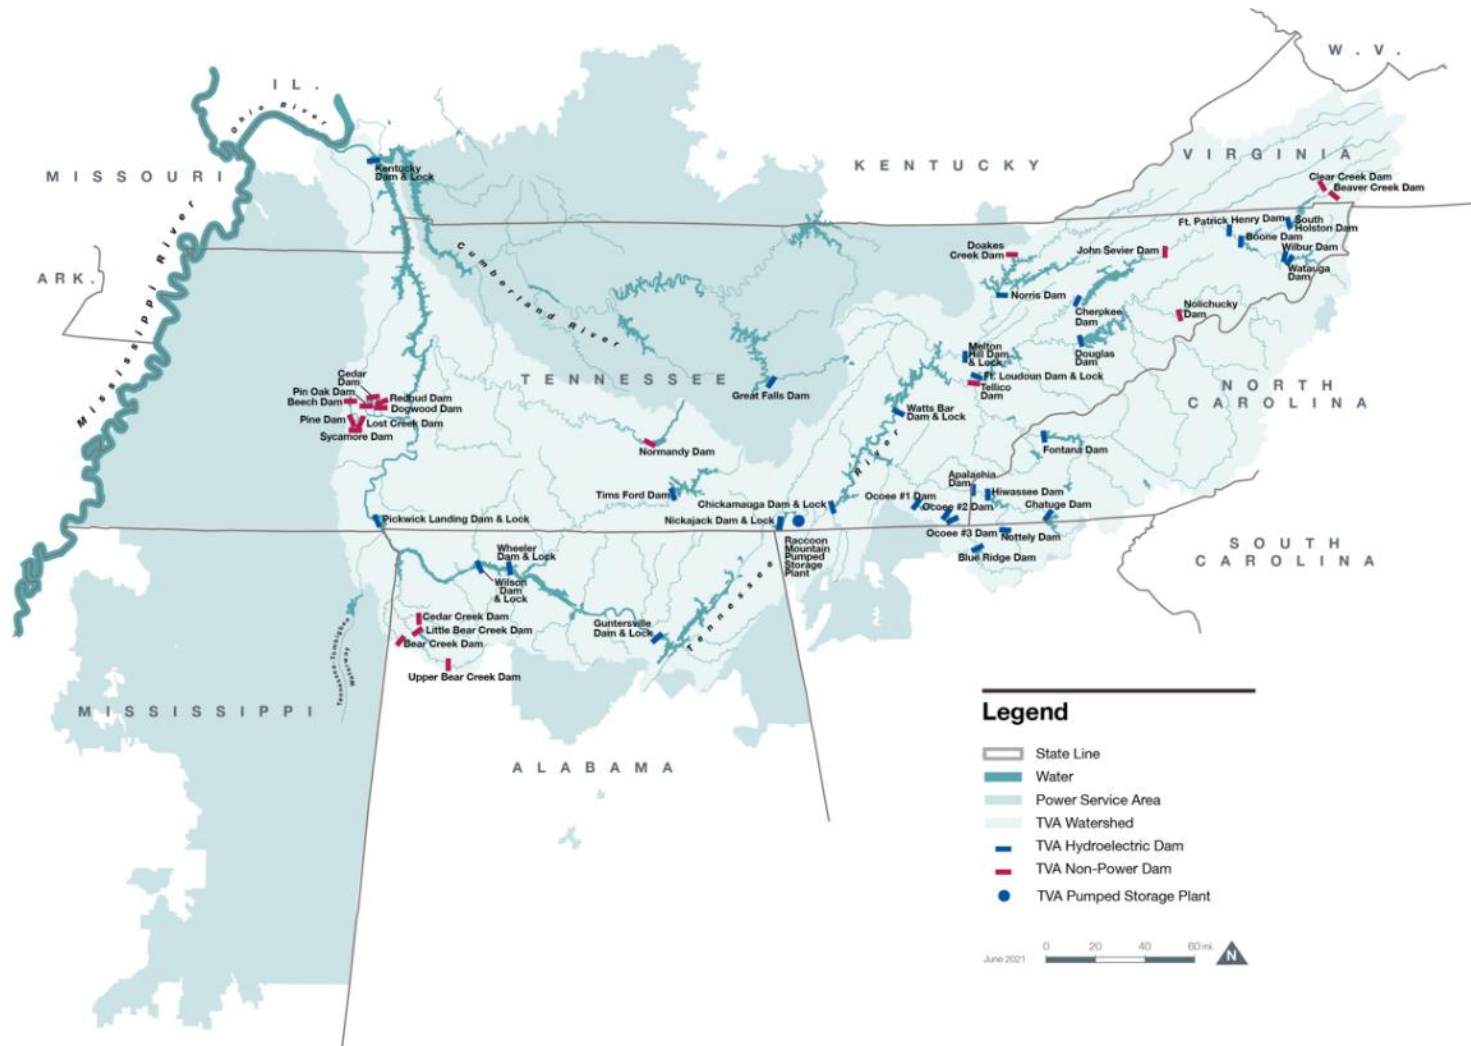

The Tennessee Valley Authority is a public owned company created by the Tennessee Valley Authority Act of 1933. Its purpose is to manage the Tennessee River system and provide low-cost electricity, flood control, and land management to a vast area in the southeastern United States.

- **Provides electricity to approximately 10 million people. Selling its power to:**
 - 153 local power utilities
 - 58 direct-serve industrial in institutional customers
 - 7 federal installations
 - 12 area utilities
- **Flood control with its 29 hydroelectric dams**
- **Navigation and land management along rivers within its region of operation**

TVA River Forecast Center

Staffed 24x7 365 days a year – around the clock monitoring of the river system to respond to changing river conditions and weather as well as flooding and emergencies across the system.

TVA River Forecast Center – Knoxville, TN

- Issue 2 - 4 river forecasts per day
- Coordinate water releases with Hydro Generation
- Coordinate hourly power schedules with system schedulers
- Monitor water levels in real-time
- Provide data Management, modeling and dissemination
- Provide stakeholder notifications
- Coordinate operations with U.S. Army Corps of Engineers
- Provide public outreach

Flood Control

- Store water in tributary dams to reduce flood levels along the mainstem Tennessee River
- Provide flood forecasting information
- Average about \$300 million annually in flood damages averted in the region; nearly \$2.5 billion since 2019

Chattanooga 1867 Flood of Record

Chattanooga Normal Level Today

Providing Data

250+ Data Collection Platforms (DCPs) are used to provide critical data to the Forecast Center. A itemization on the types of platforms used are as follows:

- Rain Gauges (precipitation)
 - Tipping Bucket - automated
- Stream Gauges (water level or stage)
 - Staff or Wire Weight – manual (reference)
 - Float – Manual or automated
 - Pressure – automated
 - Radar – automated (hydro plants are being upgraded to have at least its Headwater transmitted)

Helene

Event Summary
Watauga Dam
Nolichucky Dam

High Level Event Summary

Hurricane Helene landfall
in Florida (9/26)

Historic rainfall totals lead to high water
and flooding causing significant damage

Hurricane Helene enters
TVA territory as Tropical
Storm (9/27)

Impacts to TVA power system

Debris accumulates in
Reservoirs

Recovery efforts
begin

Historic Rainfall and Streamflow

- Flood of record was approached or exceeded in many areas
- The Tennessee River watershed in East Tennessee received about 2 months of normal rainfall in just 3 days
- Some isolated areas in the Eastern portion of the service territory received 19 inches or more of rain
- Condition Red (Imminent Breach) declared for Nolichucky Dam at 11:37 Friday 9/27 as the dam exceeded a 1-in-13,000-year flood event
- Power outages to local power customers peaked at 110,000 on Friday 9/27

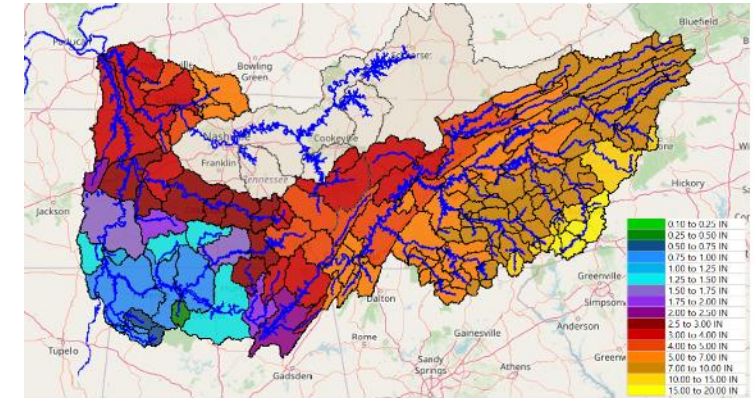

RAINFALL IN THE EASTERN
TENNESSEE VALLEY
(SEPTEMBER 23-29)

7.67 inches

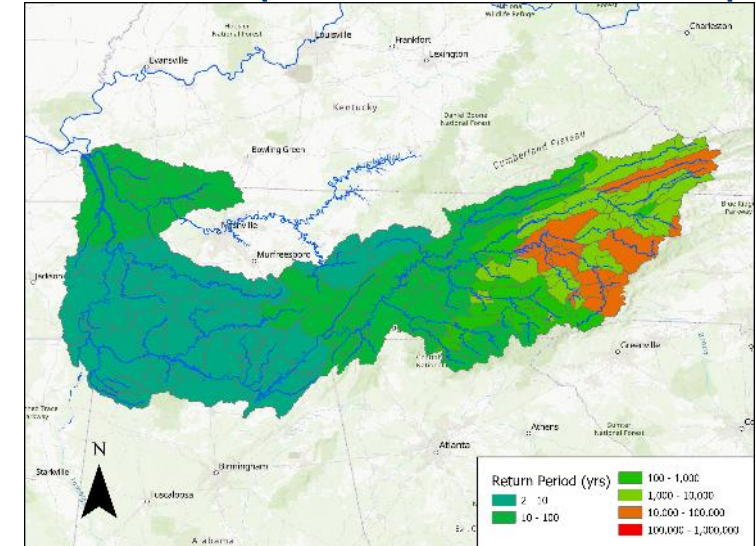

10 times normal

>9" over 8,000 mi²

Observed Storm Total Rainfall through 0400 on 9/28

Areal Rainfall Frequencies – Radar Estimated Depths

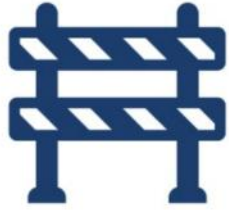

Watauga Dam

- Peak Headwater: 1970.28 (September 28 @ 0700)
- Previous Max Headwater: 1967.06 (July 8, 2013)

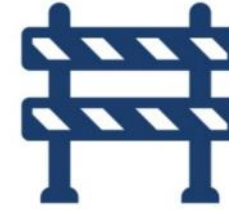

Nolichucky Conditions

**Nolichucky Dam crested
overnight September 27/28**

**Nolichucky Dam exceeded a
1-in-13,000-year flood event**

Broken River Gauges

**Experienced communication
issues**

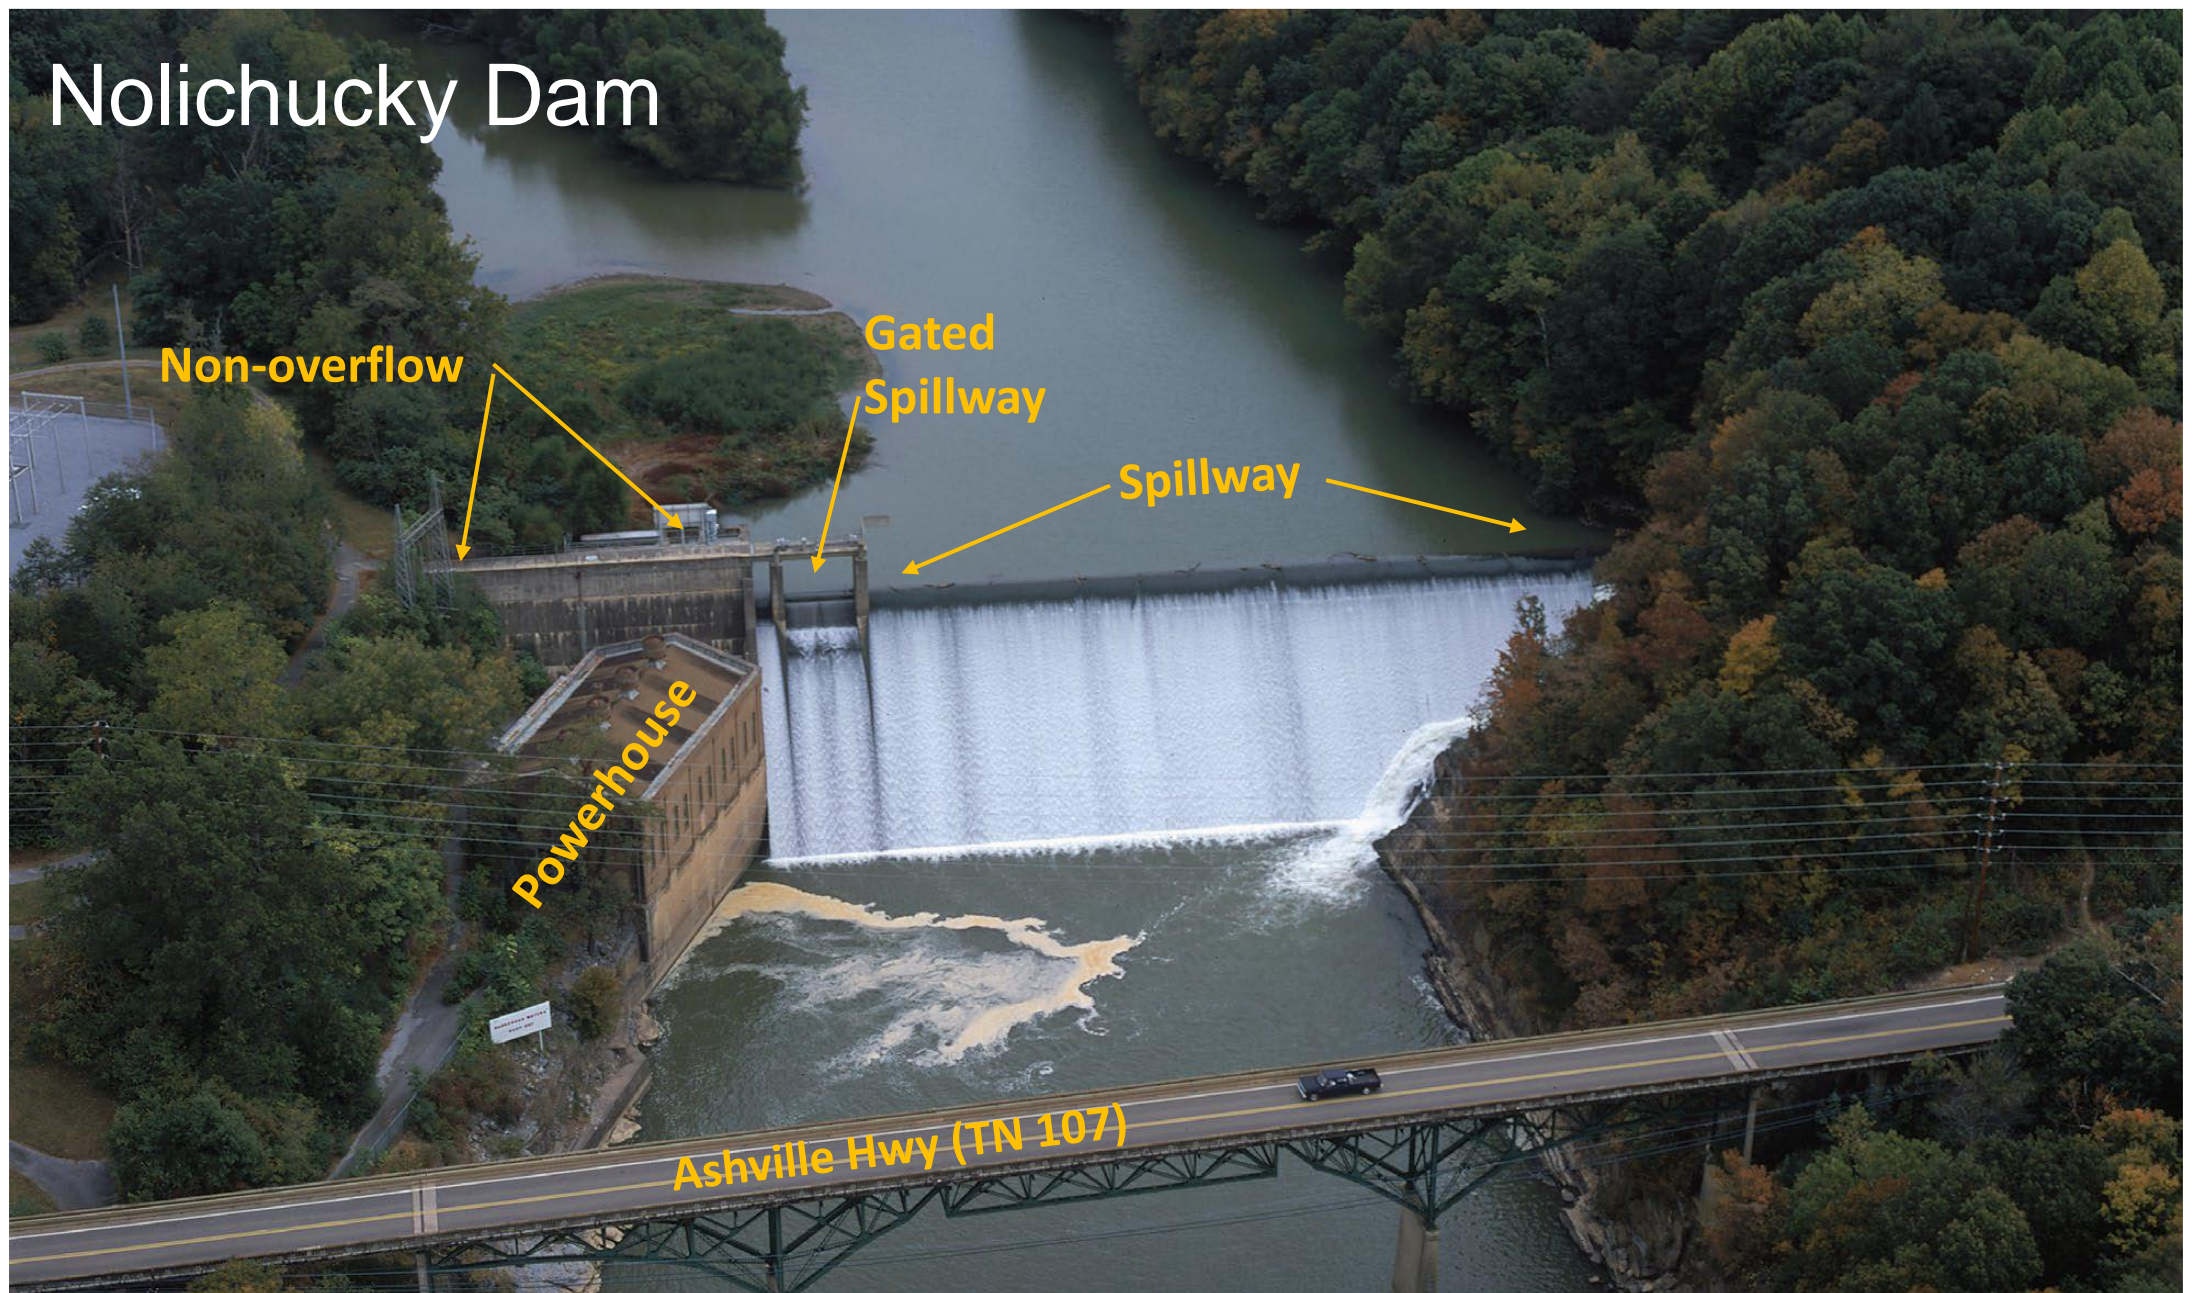

**Twice the flow of water seen
during normal conditions at
Niagara Falls**

**Spillway overtopped by 25 ft
of water**
